

## Prompts and Ideology(Use of ChatGPT and copilot)

Can do with cursor to but out of free use

### 1.

I want to create this:

Write a prompt to generate synthetic e-commerce data (around 5 files).

Write a prompt to ingest that generated data into a SQLite database.

Write an SQL prompt to generate a query that joins multiple tables and produces an output.

First, give ideology and file structure

### 2.

**It gave this folder structure and I prompted to create these.**

```
ecommerce-analytics/
|
|   data/
|   |   raw/
|
|   db/
|   |   ecommerce.db
|
|   sql/
|   |   master_join.sql
|
|   src/
|   |   generate_data.py
|   |   ingest.py
|   |   run_query.py
|
|   requirements.txt
|   README.md
```

### 3.

**I Divided the workflow in three task .Then created environment and download req.**

1.generate\_data.py

2.ingest.py

3.run\_query.py along with the sql code creation.

### 4.

**prompt:** Generate the required code for phase 1 generate\_data.py

It generated the code and tested/run the code on terminal

**Result: Created the files on database**

**Pushed this in the repo as main branch which is the basis for the code.**

5.

**Created a new branch in git from main branch called feature/ingest.py.**

**Prompt:** Generate code for ingest.py

**Tested by running the .py file**

**Now the ingest part is done.**

**Since Verified I raised merge pull to main.**

6.

**Similarly created a new branch called feature/sql-query.**

**Prompt: Generate the code for run\_query.py along with the SQL code creation.**

Along with required files

Tested this by running the file.

Found the right result. Raised PR request to Main.

7.

**Now I want to create a run file that runs the three commands in order rather than me running it manually.**

**Result:**

**Option: Windows Batch File**

8.

**Enhancement**

**The generate\_data.py I wanted in a structure**

**prompt: makes this into class and method.**

## TEST AND RESULT

● PS C:\Users\kisha\Desktop\ecommerce-analytics> venv\Scripts\activate

```
C:\Users\kisha\Desktop\ecommerce-analytics>echo Running e-commerce ETL pipeline...
Running e-commerce ETL pipeline...
```

```
C:\Users\kisha\Desktop\ecommerce-analytics>echo Generating synthetic data...
Generating synthetic data...
```

```
C:\Users\kisha\Desktop\ecommerce-analytics>python src\generate_data.py
Synthetic dataset generated successfully.
```

```
C:\Users\kisha\Desktop\ecommerce-analytics>echo Ingesting into SQLite...
Ingesting into SQLite...
```

```
C:\Users\kisha\Desktop\ecommerce-analytics>python src\ingest.py
Ingestion complete. Check logs/ingestion.log.
```

```
C:\Users\kisha\Desktop\ecommerce-analytics>python src\run_query.py
```
